Example

To compute

$$\int 2xe^{x^2}\,dx$$

we must find an antiderivative.

Example

To compute

$$\int 2xe^{x^2}\,dx$$

we must find an antiderivative. We note that $\frac{d}{dx}x^2 = 2x$.

Example

To compute

$$\int 2xe^{x^2}\,\mathrm{d}x$$

we must find an antiderivative. We note that $\frac{\mathrm{d}}{\mathrm{d}x}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} =$$

Example

To compute

$$\int 2xe^{x^2}\,dx$$

we must find an antiderivative. We note that $\frac{d}{dx}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} = e^{x^2} \cdot 2x$$

EXAMPLE

To compute

$$\int 2xe^{x^2}\,\mathrm{d}x$$

we must find an antiderivative. We note that $\frac{\mathrm{d}}{\mathrm{d}x}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} = e^{x^2} \cdot 2x = e^u \cdot \frac{\mathrm{d}u}{\mathrm{d}x}.$$

Example

To compute

$$\int 2xe^{x^2}\,\mathrm{d}x$$

we must find an antiderivative. We note that $\frac{\mathrm{d}}{\mathrm{d}x}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} = e^{x^2} \cdot 2x = e^u \cdot \frac{\mathrm{d}u}{\mathrm{d}x}.$$

This looks exactly like the result of applying the Chain Rule to the composition $e^{u(x)}$!

EXAMPLE

To compute

$$\int 2xe^{x^2}\,dx$$

we must find an antiderivative. We note that $\frac{d}{dx}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} = e^{x^2} \cdot 2x = e^u \cdot \frac{du}{dx}.$$

This looks exactly like the result of applying the Chain Rule to the composition $e^{u(x)}$! This tells us that

$$\int 2xe^{x^2}\,dx = e^{x^2} + c.$$

Example

To compute

$$\int 2xe^{x^2}\,\mathrm{d}x$$

we must find an antiderivative. We note that $\frac{\mathrm{d}}{\mathrm{d}x}x^2 = 2x$. If we let $u = x^2$, then

$$2xe^{x^2} = e^{x^2}\cdot 2x = e^u \cdot \frac{\mathrm{d}u}{\mathrm{d}x}.$$

This looks exactly like the result of applying the Chain Rule to the composition $e^{u(x)}$! This tells us that

$$\int 2xe^{x^2}\,\mathrm{d}x = e^{x^2} + c.$$

The method of Integration by Substitution is intended to integrate a product of functions that appears to have come from an application of the chain rule.

The Method

$$\int x^3 \sqrt{x^4 + 5}\, dx \quad =$$

Example

Compute

$$\int x^3\sqrt{x^4+5}\,\mathrm{d}x.$$

Let $u = x^4 + 5$ so $\mathrm{d}u = 4^3 x\,\mathrm{d}x$. Hence $\mathrm{d}u/4 = x^3\,\mathrm{d}x$. Therefore

$$\int x^3\sqrt{x^4+5}\,\mathrm{d}x = \int \sqrt{u}\frac{\mathrm{d}u}{4}$$

Example

Compute

$$\int x^3\sqrt{x^4+5}\,\mathrm{d}x.$$

Let $u = x^4 + 5$ so $\mathrm{d}u = 4^3 x\,\mathrm{d}x$. Hence $\mathrm{d}u/4 = x^3\,\mathrm{d}x$. Therefore

$$\begin{aligned}\int x^3\sqrt{x^4+5}\,\mathrm{d}x &= \int \sqrt{u}\frac{\mathrm{d}u}{4} \\ &= \frac{1}{4}\int u^{\frac{1}{2}}\,\mathrm{d}u\end{aligned}$$

Example

Compute

$$\int x^3\sqrt{x^4+5}\,\mathrm{d}x.$$

Let $u = x^4 + 5$ so $\mathrm{d}u = 4^3 x\,\mathrm{d}x$. Hence $\mathrm{d}u/4 = x^3\,\mathrm{d}x$. Therefore

$$\begin{aligned}\int x^3\sqrt{x^4+5}\,\mathrm{d}x &= \int \sqrt{u}\frac{\mathrm{d}u}{4}\\ &= \frac{1}{4}\int u^{\frac{1}{2}}\,\mathrm{d}u\\ &= \frac{1}{4}\left(\frac{2}{3}u^{\frac{3}{2}}\right)+c\end{aligned}$$

Example

Compute

$$\int x^3\sqrt{x^4+5}\,dx.$$

Let $u = x^4 + 5$ so $du = 4^3 x\,dx$. Hence $du/4 = x^3\,dx$. Therefore

$$\begin{aligned}\int x^3\sqrt{x^4+5}\,dx &= \int \sqrt{u}\frac{du}{4} \\ &= \frac{1}{4}\int u^{\frac{1}{2}}\,du \\ &= \frac{1}{4}\left(\frac{2}{3}u^{\frac{3}{2}}\right)+c \\ &= \frac{1}{6}(x^4+5)^{\frac{2}{3}}+c.\end{aligned}$$
